The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

16

Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lie et al(US 6,686,301) alone for reasons as set forth in the previous office action, inter alla.

17

Claims 9-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Li et al(US 6,686,301) in view of Morin et al (US 64979540 or Morin et al(US 6096156).

Applicants' amendment now calls for the claim to include plasma activation for the textile rubber bond. Each reference to Morin et al teaches that it is known in the art to utilize plasma means to activate bonding between textile and rubber material ('156 : col 2, lines 7-14; '954 : col 2, lines 11-24.) It would have been obvious to one of ordinary skill in the art at the time the invention is made to combine the teaching of either reference to Morin et al and utilize such plasma type activation between the textile and rubber material, as taught by each reference to enhance the respective bonding therebetween- see '156, col 2, lines 13-14; '954, col 2, lines 24-26. Concerning claims 12-14, the '156, reference teaches air plasma activation in col 2, lines 14-20.

Art Unit: 1774

Concerning claim 15, the primary reference teaches the organosilane material in col 2, line 3. Concerning claims 11, the primary reference teaches aqueous dip in col 2, line 63-col 3, line 11.

18

Applicant's arguments filed 2-22-05 have been fully considered but they are not persuasive. Applicants argue that the amine-functional silane compound taught by Lie et al is not the same as contemplated by applicants. Applicants finally argue that the reference does not teach or suggest the use of an epoxy pretreatment to enhance to more perfect the bond between the silicone rubber and textile material the activation. To this the examiner responds that the cited Li et al reference indeed teaches an epoxy pretreatment of the textile in col 1, lines 57-60. Here, an epoxy material is taught. The examiner further submits that the cited reference indeed teaches same silane material in col 2, lines 1-3. In regards to claims 9-15, new references Morin et al (US 6497954 and US 6096156) are submitted in response to the submitted amendment to same claims. Accordingly , any argument to said claims are now moot.

19

Applicant's submission of the requirements for the joint research agreement prior art exclusion under 35 U.S.C. 103(c) on 2-2-05 prompted the new ground(s) of rejection

Art Unit: 1774

under 37 CFR 1.109(b) presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.02(l)(3). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
